

## Human samples clearance

We remember that human-derived samples **must be pseudonymized**. Therefore, we cannot accept samples that come along with personal identification data (name and surname, fiscal code, etc.). Other data related to the study such as prognosis, biometrics values, age, sex and other information not directly associated to an individual can be provided with no limitation (please use the Sample Spreadsheet available in the web site's documents section).

If a Sample Spreadsheet is received with personal individual information an internal procedure will force us to destroy the file and ask to submit a new one without personal information related to the samples.

If samples are sent with personal information directly attached to the containers, IGATech will return them without performing any analysis. IGATech will not accept any tissue or body fluid containing pathogenic agent above BSL-1.

If human samples are provided in the form of tissue or body fluid, please fill out the form below and return a signed copy.

Reference quotation: \_\_\_\_\_

- The samples **does not contain** any pathogenic agent (viral, bacterial, fungal, prionic)
- It is not known whether the samples **may contain** pathogenic agents
- It is known that the samples **contain** pathogenic agents; specify below:
